=====  
===== Sinchron v1.1 = "You can not go back, you can not rewind." ===== How often have you had the urge to do just that, to go back to the beginning of a program or game? Not just to play it again, but really, to rewind it? Can you? Sinchron brings you some peace of mind. Whenever you wish to rewind, you can, with a few clicks, and press a button, and watch the "current" time turn into the "original" time. The resolution is pretty good, at least for the amateurs. No "background" at all. In short, I write a program, and give it to someone else, then watch them work out the bugs. But they never get it right. So I email it to you and get back to the business of my real life. If the program ever gets good, I do my thing again. ===== Sinchron's style of operation = You "start" Sinchron by loading the default screen saver. If you wish, you can "delete" Sinchron, or replace it with your own choice of program. Once you do that, you can then "start" Sinchron and "activate" it. (Sinchron runs as its own screen saver, and all you have to do is click its "icon" or "start" the program.

=====  
===== Sinchron's way of looking at time = If you have ever noticed that the clock on your PC changes slowly, you are watching S

## What's New in the?

A sine wave is typically represented by a graph of a continuous sine curve on a computer display screen. The curve's sine waves appear on a screen graphically, resembling a sinusoidal waveform and occupying a portion of the screen. A sine wave is a particular case of a general mathematical function (a mathematical function can be a continuous curve, or a discrete function that returns a certain value for each of a finite number of inputs). You are free to do anything you want with this application, including sell it, or give it to someone else, or post it on your site, or re-release it with a new name. License: MIT Author: Alex Volkov Source code: (GitHub) Ideas used in this application: sin(), cos(), sqrt(), round() Links: Revision History: 2011-12-01: Created Contributors: Alex Volkov (alex@volkov.net) Thanks: @volkov for the suggestions, and @mcruttenden and @gillesj.org for the inspiration. Notes: I have no real idea how this screensaver works. It uses periodic signals to display the time. A periodic signal is a digital signal that repeats the same pattern every time it is sent. It is used in communication and other electronic devices. A lot of programming was used to make this screensaver work. New Features: v2.0: \*Added completely new graphics engine based on the XNA framework, and the interface was redesigned from scratch \*Updated from scratch the way the screensaver is managed, and some settings were improved \*The last version of the screensaver can now start on Windows 7 computers! \*Minor changes in the graphics engine \*The application can now be compiled for XNA framework, allowing it to run on Windows 8 and Windows Phone 8. \*The CPU usage is much lower now, thanks to the graphics engine change \*The source code is now under the MIT license \*Updated the screenshots and added some new ones v2.1: \*The time format can now be changed to seconds, minutes, hours and/or minutes, hours \*Added an option to show the day and the month in the time format \*Updated the images for the main window, in order to fit the new screen resolution

---

## System Requirements For Sinchron:

Minimum: OS: Windows 7, Windows 8, Windows 10, Windows Server 2008, Windows Server 2012, Windows Server 2008 R2, Windows Server 2012 R2 Processor: Dual Core processor or higher recommended, Quad core processor recommended Memory: 1GB recommended, 2GB minimum Graphics: Compatible NVIDIA or ATI graphics card Hard Drive: 16GB available space Recommended: OS: Windows 7, Windows 8, Windows 10, Windows Server 2008, Windows Server 2012, Windows Server 2008 R2, Windows Server 2012 R2
